

SPRINT 2

Issue Type	Name	Story Points Estimate
Story	As a portfolio manager, I want to filter events by region, severity or industry so that I can focus only on disruptions relevant to my investments	3
Story	As a user, I want loading and error messages to appear when backend data is being fetched or fails, so that I understand the current system state.	2
Story	As an investor, I want to see my portfolio's Value-at-Risk (VaR), so that I understand the potential losses I could face during market disruptions.	8
Story	As an investor, I want the system to calculate potential portfolio losses using Monte Carlo simulations, so that I can understand the range of possible financial outcomes.	8
Story	As an investor, I want the platform to generate explanations for its risk predictions, so that I can understand the reasoning behind the AI insights.	8
Story	As an investor, I want to upload my portfolio holdings, so that the system can analyze how global events may affect my investments.	3
Story	As an investor, I want to simulate hypothetical events like natural disasters or geopolitical crises, so that I can understand how such events might affect my investments.	8
Story	As a developer, I want to implement Portfolio & Risk API Endpoints, so that the frontend can securely request and receive risk intelligence data.	5

SPRINT 2

Issue Type	Name	Story Points Estimate
Story	As an investor, I want the platform to generate natural language explanations for its risk predictions, so that I can understand the underlying reasoning behind the AI's insights.	8
Story	As a user, I want to view a centralized risk dashboard with a sector exposure heatmap, so that I can visually identify if my investments are too concentrated in high-risk industries.	5
Story	As as registered user, I want to recover my password, so that I can regain access to my account without losing data.	2
Story	As a returning user, I want to click Login from the landing page, so that I can securely access my dashboard.	2
Story	As a user, I want the frontend to fetch live data from backend API's, so that all the pages display dynamic and updated information	5
Story	As a user, I want quick access buttons on the home page, so that I can move directly to the feature I need.	2

We integrated Monte Carlo simulations and Value-at-Risk (VaR) metrics to provide quantitative loss estimates for investor portfolios. We developed a centralized risk dashboard with sector heatmaps and an AI reasoning layer that translates complex data into plain-English insights. We created a landing page explaining all the features of the web application. We drafted our technical paper.
