

Persona: Financial Risk Analyst (Professional User)

Sophia Chen is a 38-year-old financial risk analyst working in a high-pressure, data-intensive environment where accurate risk modeling is critical. She regularly evaluates portfolios, market shocks, and inter-company dependencies using quantitative techniques. She needs advanced tools that support Monte Carlo simulations, causal relationship mapping, and large-scale scenario testing. Her main challenge is that existing tools are time-consuming and lack integrated risk propagation analysis. She uses RippleWealth to run deep simulations, analyze systemic risk paths, and generate faster, more explainable risk reports.
